

BaseRock partners with Radiflow to add OT risk assessment and continuous monitoring to its IEC 62443 advisory services

UK manufacturers get a single route from IEC 62443 risk assessment to measurable, continuously monitored risk reduction, combining BaseRock's industrial cybersecurity expertise with Radiflow's OT security platform.

LONDON, UK — 20th October 2026 — BaseRock IT Solutions, a UK specialist in industrial IT and manufacturing cybersecurity, today announced a partnership with Radiflow, a global provider of OT cybersecurity and risk management solutions for industrial and critical infrastructure. Through the partnership, BaseRock will add OT risk assessment and continuous monitoring to its IEC 62443 advisory services, powered by Radiflow's technology.

The partnership closes a gap that most IEC 62443 programmes run into.

An assessment gives a point-in-time view of risk, but once the consultants leave, manufacturers have little evidence of whether that risk is actually going down.

With Radiflow, BaseRock can now help customers:

- **Map the real OT environment.** Passive asset discovery and network mapping, with no disruption to production.
- **Quantify risk against IEC 62443.** Prioritised, evidence-based assessments that show where to invest first.
- **Monitor continuously.** Threat detection and anomaly alerts that feed into the customer's existing SOC and SIEM tools.
- **Prove progress.** Ongoing risk reporting for boards, insurers and auditors.

BaseRock provides the advisory expertise and runs each engagement, while Radiflow provides the platform and technical enablement. Customers get one accountable partner from first assessment to ongoing protection.

“

An assessment report on its own doesn't reduce risk. What matters is turning insight into action and being able to demonstrate progress over time. Our partnership with Radiflow enables us to enhance our IEC 62443 advisory services with ongoing asset visibility, risk assessment and continuous monitoring, helping our customers understand where their greatest risks exist, prioritise investment, and measure improvement over time.”

Martin Gatt, Managing Director,
BaseRock IT Solutions

“

Manufacturers don't need another dashboard. They need to know which risks matter, and whether those risks are actually going down. BaseRock brings deep IEC 62443 and industrial expertise. Radiflow adds the risk intelligence and continuous monitoring that turn that advice into measurable outcomes. This is exactly the partner model we're building across Europe: specialist advisors, powered by our platform.”

Said David Moss, Chief Commercial Officer,
Radiflow

About BaseRock IT Solutions

BaseRock IT Solutions is an infrastructure, cyber security, and industrial technology partner trusted by organisations that cannot afford downtime, disruption, or uncertainty. We design, build, secure, and support OT and IT environments that keep operations running, from factory floors to corporate networks.

Our approach is simple: clarity, competence, and delivery without drama. We combine deep technical expertise with real world operational understanding to help organisations modernise safely, strengthen resilience, and move forward with confidence.

About Radiflow

Radiflow helps industrial and critical infrastructure operators move from visibility to actionable OT security. Founded in 2009 and headquartered in Tel Aviv, Israel, Radiflow offers a platform that combines asset discovery, threat detection (iSID) and continuous, automated risk assessment (CIARA), aligned with IEC 62443 and NIS2 requirements.

Operators can see their OT environment, understand which risks matter most and prove that those risks are being reduced. Radiflow serves energy, water, manufacturing, maritime and pharmaceutical organisations worldwide through a network of specialist partners and its global partnership with Belden. www.radiflow.com
